## Comment patcher des applications tierces sur une machine avec N-Central ?

Maxime - 2022-09-29 - N-Central

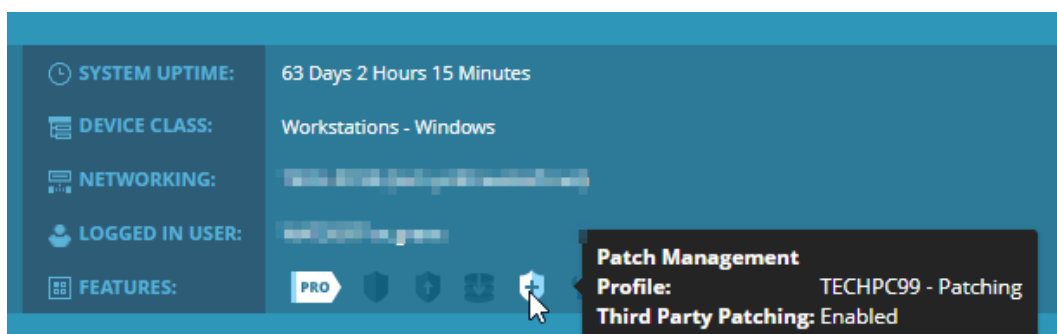

Pour patcher une application tierce supportée par N-Central, voici ce qu'il faut faire :

1. Activer le module "Patch Management" , choisissez un profil existant ou un nouveau, puis activer la gestion des patches des applications tierces

The screenshot displays the N-Central interface for a device named TECH-PC99. The top section shows system details: CPU (Intel(R) Core(TM) i7-10700 CPU @ 2.90GHz), DISK (476.94 GB), MEMORY (16.00 GB), OS VERSION (Microsoft Windows 10 Professionnel), and CUSTOMER NAME (WATSOFT (Internal)). Below this is a navigation bar with tabs: Overview, Tools, Monitoring, Asset, Notes, Settings (highlighted with a red box), Remote Control Settings, and Reports. Under the Settings tab, there is a sub-bar with: Properties, Local Agent, Monitoring Options, Maintenance Windows, Security Manager, and Patch Management (highlighted with a red box). The 'Patch Management' section is titled 'DEPLOYMENT DETAILS' and contains three settings: 'Enable Patch Management:' with a checked checkbox (highlighted with a red box), 'Patch Management Profile:' with a dropdown menu showing 'TECHPC99 - Patching' and 'ADD'/'VIEW/EDIT' buttons (the dropdown and buttons are highlighted with a red box), and 'Enable Third Party Patching:' with a checked checkbox (highlighted with a red box).

1. Une fois le module déployé, vous pouvez le consulter dans les informations de la machine

1. Ensuite, vous pouvez lancer une tâche de découverte de Patch à la demande (si vous n'avez pas déjà une tâche programmée)
